

Doctor's Training

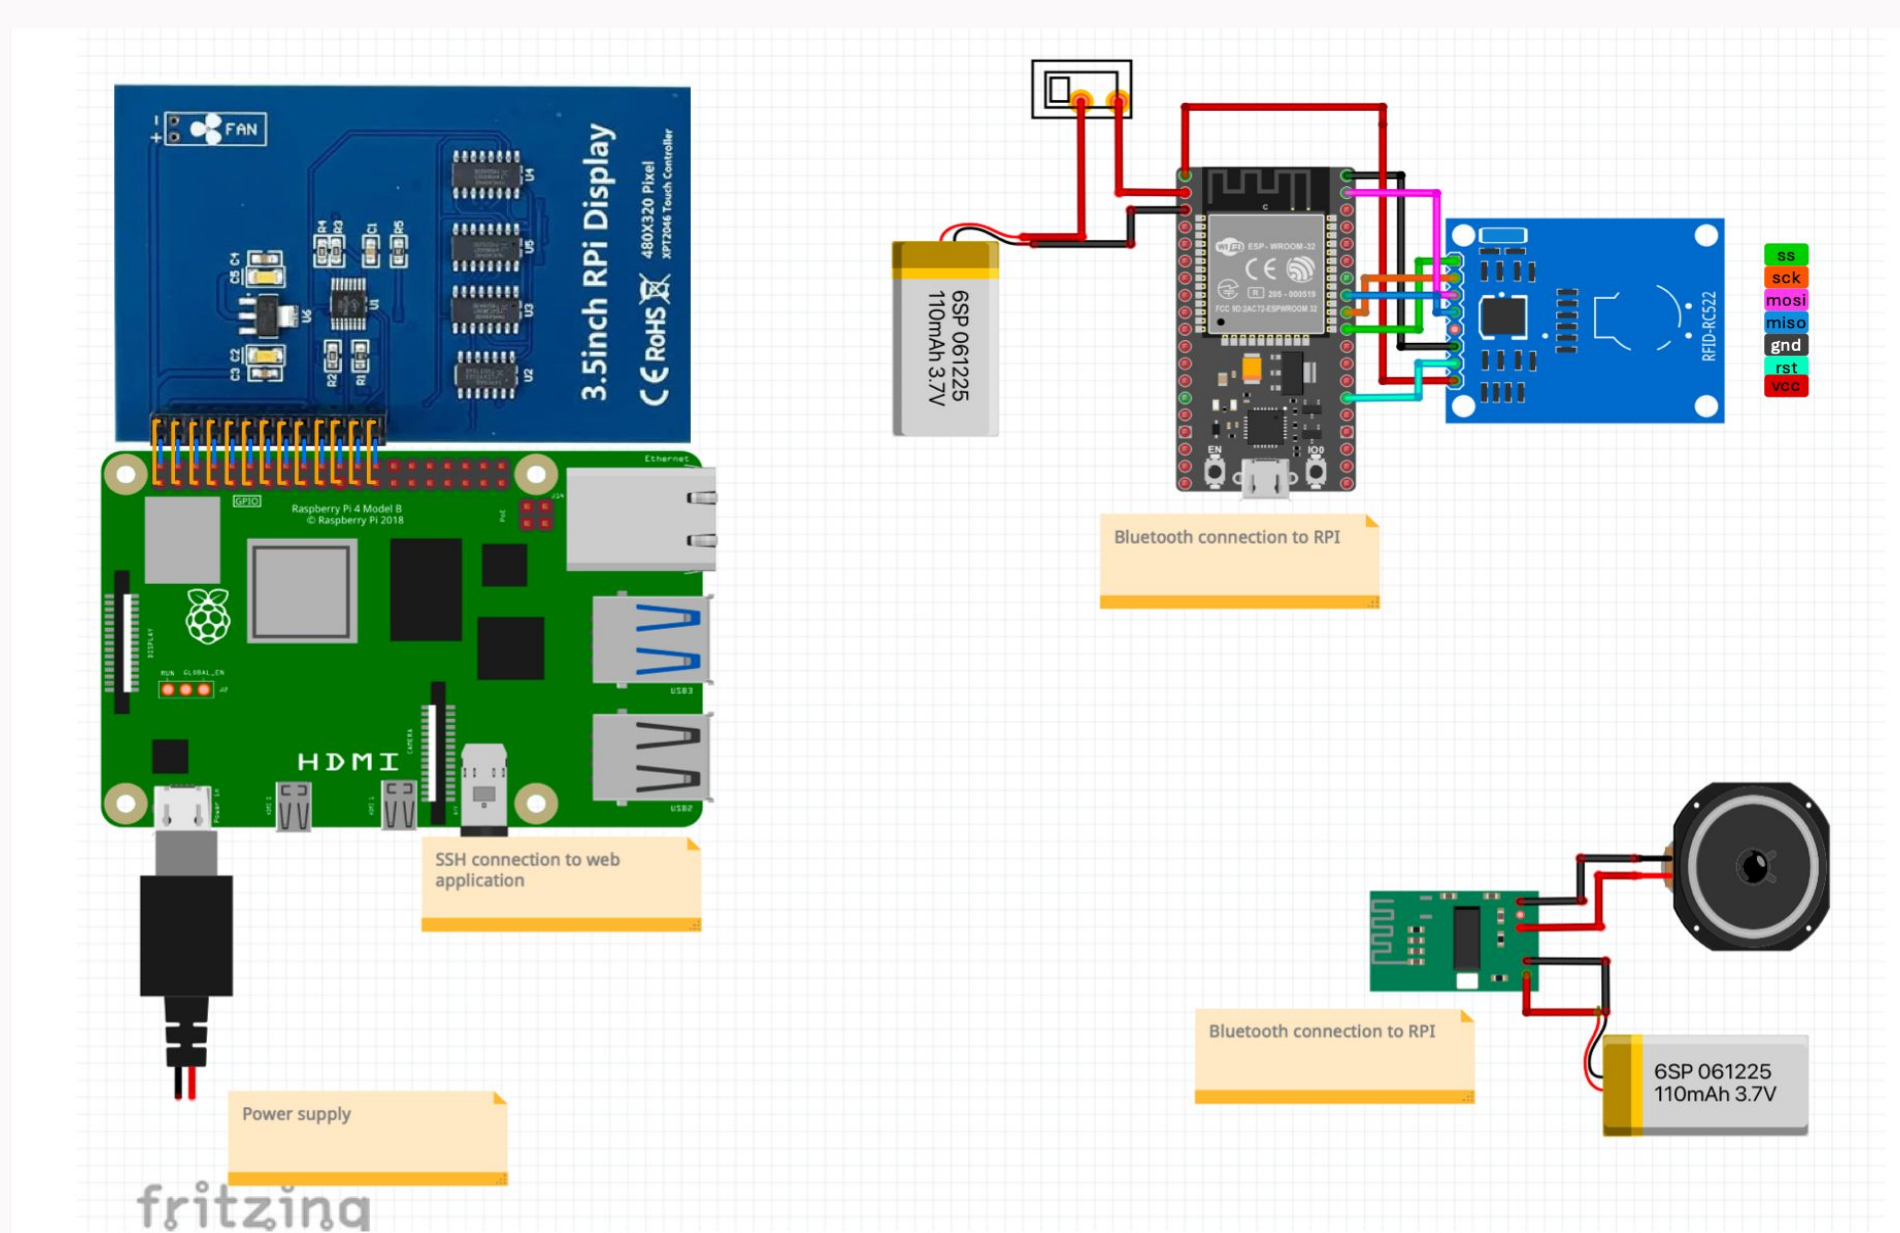

Anamnesis and Auscultation Training Simulation

Medical students lack opportunities to practice anamnesis

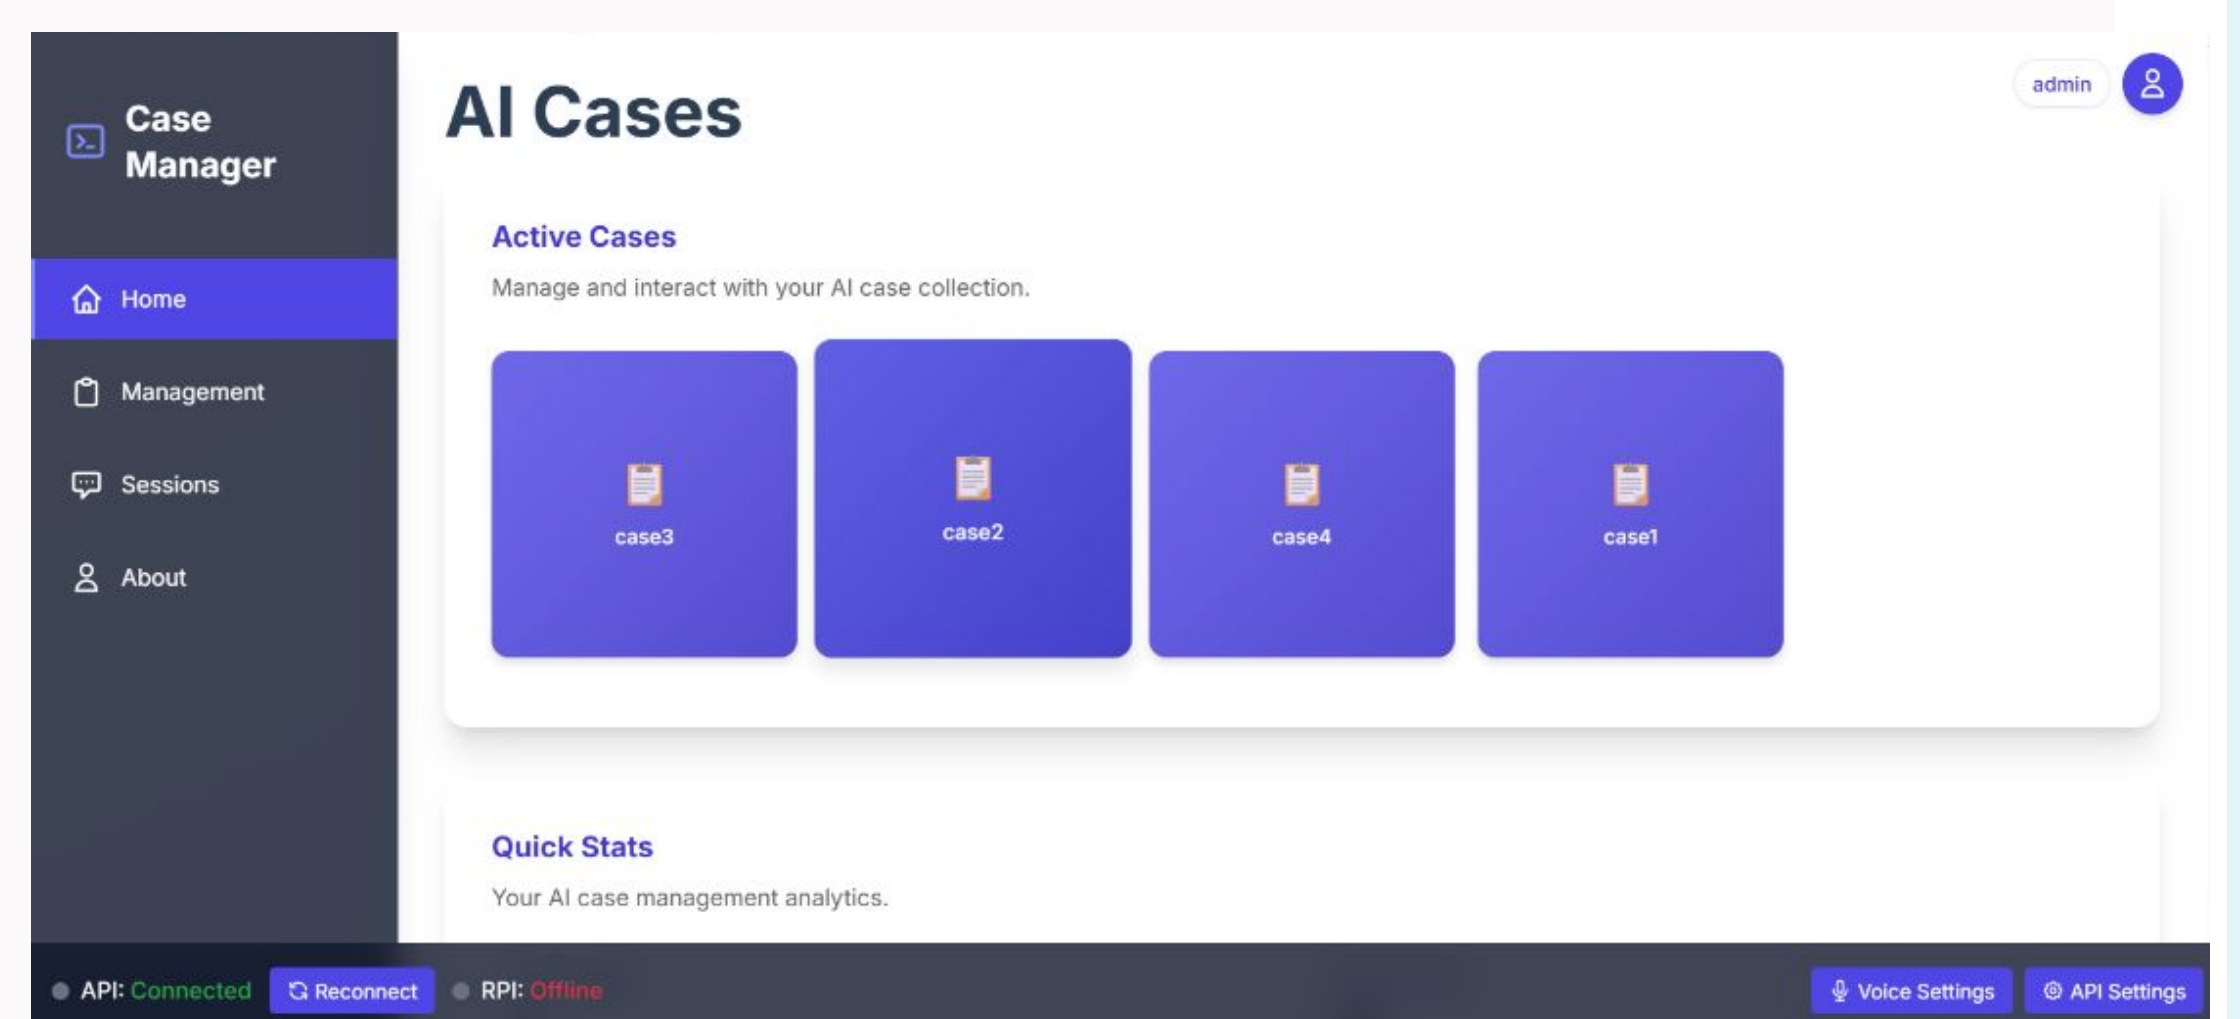

A configurable diagnostic simulation platform for training medical students:

- An interactive - AI based chat interface where students conduct patient interviews with virtual patients
- “Smart stethoscope” to simulate auscultation at different body spots based on disease configuration
- Real-time diagnostic feedback for learning reinforcement

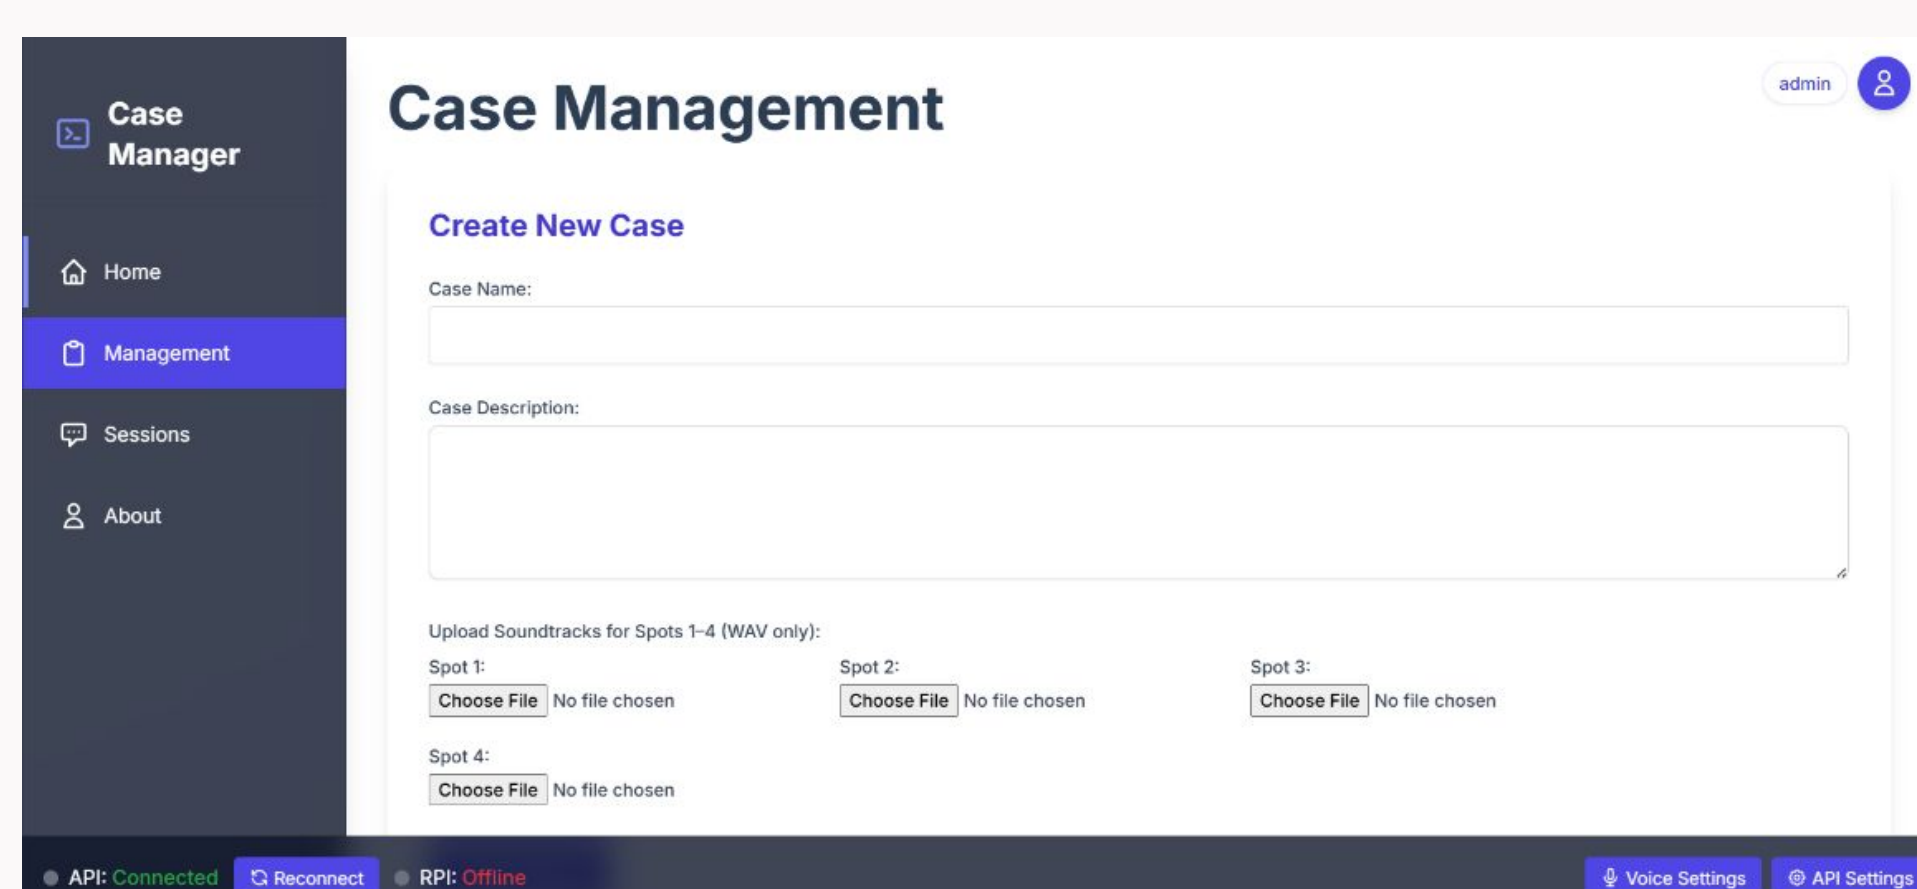

Wiring Diagram

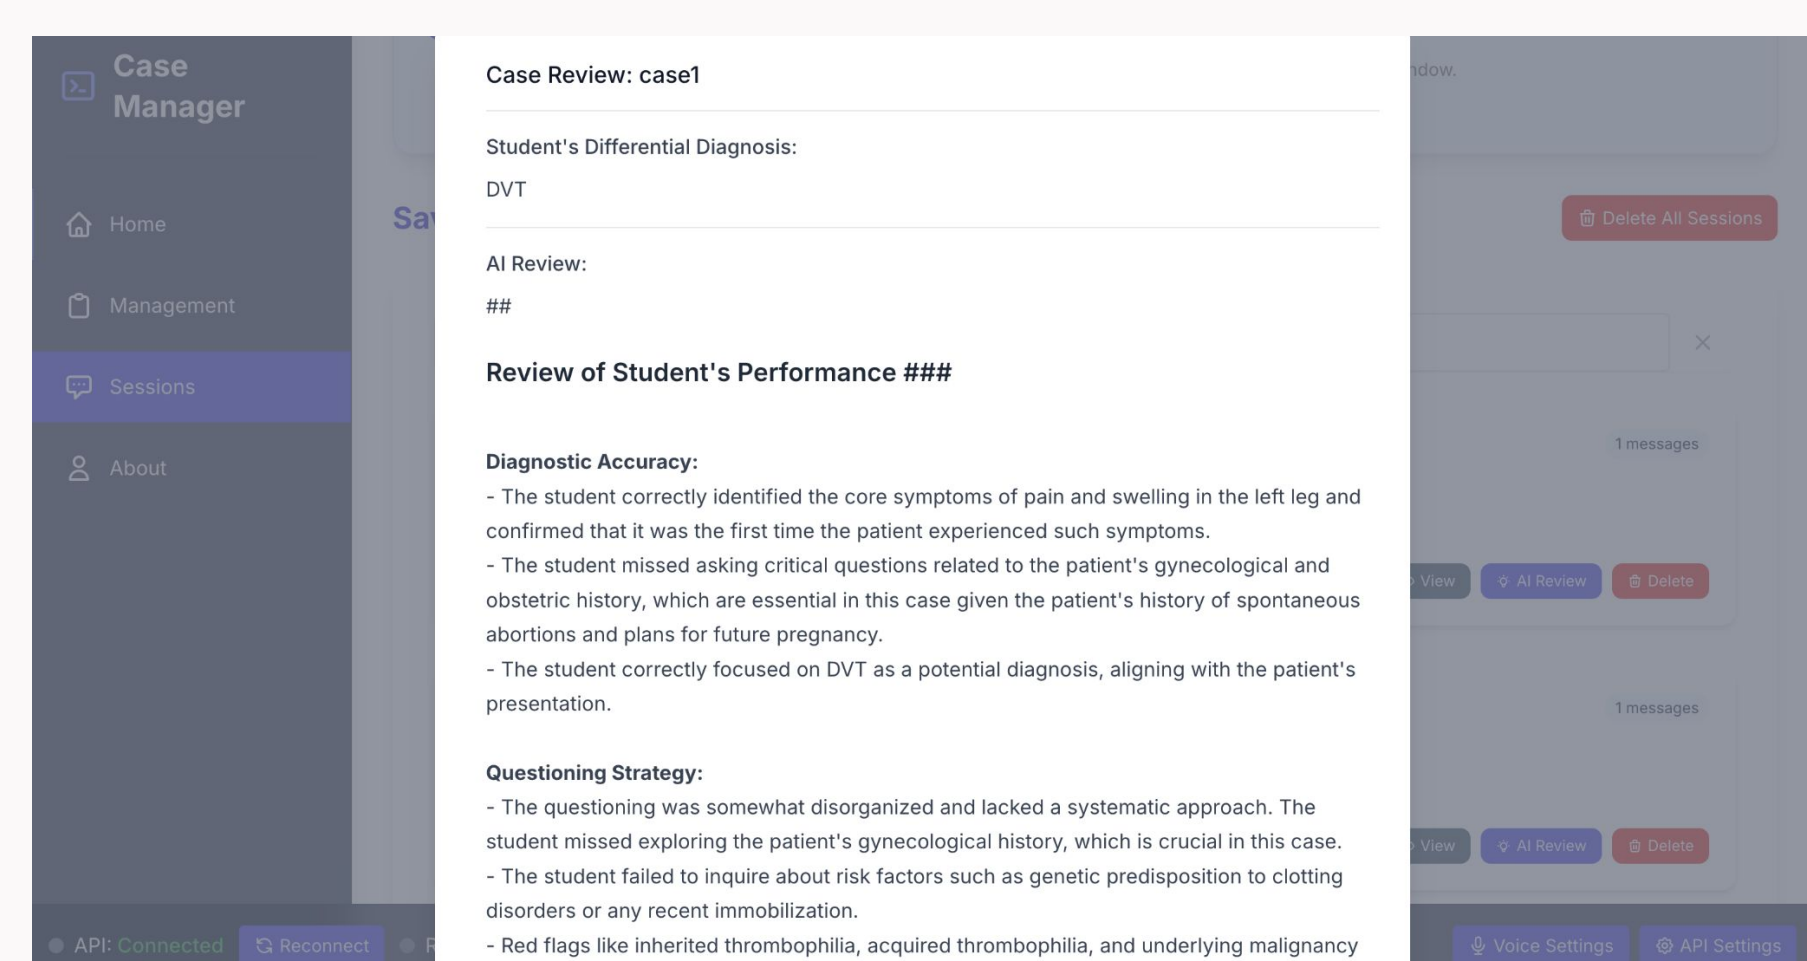

Chat with a patient according to specific case

Manage existing cases and soundtracks for smart stethoscope

Get feedback on the diagnose
